

Jura Elite 'Integrated Privacy' DOOR FURNITURE FITTING INSTRUCTIONS

Fitting Instructions for Codes: 9051, 9052, 9053, 9054, 9055& 9056.

Suitable for door thicknesses to 55mm.

These handles are designed to be fixed to door with through-fixing bolts and wood screws provided.

- <u>Latch</u>
 - 1. Measure the door thickness and mark the centre at desired height for latch.
 - 2. Mark the face of door each side for drilling of spindle and screw holes.
 - Note: The spindle hole will need to be centred at 60mm from the door edge (backset)
 - **3.** Drill a 25mm (1") hole through door edge. *Note:* <u>It is important to drill this hole square.</u>
 - Drill a 25mm (1") spindle hole through door face.
 Note: For clean cut-outs, drill from both sides, meeting in the middle of door.
 - 5. Remove any loose sawdust and insert latch. Scribe around face, remove, then chisel out recess to enable latch to sit flush with door edge.
 - 6. Insert latch ensuring that the tongue is facing the right way for the door to open and close correctly, also ensure that the small thread for the privacy stem is facing inwards to the room. Fasten latch with screws supplied.
 - 7. Gently close door against frame and mark latch position for fitting of strike plate. Router or chisel out door frame so strike plate fits flush, allowing for the plastic recess box if required.

<u>Handles</u>

- 1. With latch fitted to door, ensure all holes line up prior to fitting door handles.
- 2. Remove rose covers from levers.
- 3. Unthread short screws from threaded sleaves. Insert short-end thru-screws through the horizontal hole directly below the lever and the other through the hole at the 12 o'clock position in the rose and tighten through into threaded sleeve.
- Insert small spring into each lever and place each half of the spindle over the spring into the handle.
 Note: These small springs are provided only to put pressure on each half of the spindle until the grubscrews are tightened. Each spindle has a hole in one end, this is for the spring to locate onto when inserted into the handle.
- 5. Insert handle from 'step 3' onto spindle, ensure the half spindle locates into latch.
- 6. Insert long thru-screws through other half of handle set and place on door, again ensuring the half spindle locates onto latch. Tighten screws securely.
- 7. In the 4 o'clock and 8 o'clock positions on the mounting plate's, secure a wood screw then press on concealed fix covers, ensure the small hole in the cover plate lines up with the horizontal hole in the rose closest to the door edge.
- 8. Insert Privacy Stem through small hole in cover plate and thread through door into latch.
- Tighten the grubscrew on inside of levers onto spindle each side of door.
 Note: <u>The grubscrews may need a re-tighten after a bedding-in period. We Recommend Medium Strength Thread-lock to be used, Windsor</u> <u>Code: 1276.</u>
- 10. Test door and if necessary, adjust strike tongue to take up any rattle. Note: Take extra care when working through step 2 of the instructions above when establishing the height & position of handles on the door, be sure to mark out both sides of the door the same to ensure the handles are even on both sides. Note: For clean cut-outs drill from both sides, meeting in the middle of door. Drill 6.0mm (or ¼") holes for through door bolts.
